                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   165
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       was amplified at the phage stage and normalized (RoT value = 5). This library was constructed using the CapTrapper method and Trehalose thermoactivated reverse transcriptase to enrich for full-length clones. Library constructed by Piero Carninci (RIKEN, Genome Science Laboratory, Japan: http://genome.rtc.riken.go.jp/) using egg RNA supplied by Marc Kirschner (Harvard Medical School, Dept. of Cell Biology). References: Methods Enzymol.303:19-44 and Genome Res. 10:1617-1630 Please contact Marc Kirschner (marc@hms.harvard.edu) for information on obtaining aliquots of this cDNA library."

US-09-872-153-20

Sequence 20, Application US/09872153

Patent No. US20020082207A1

GENERAL INFORMATION:

APPLICANT: Hists, Shannon K.

APPLICANT: Harlocker, Susan L.

APPLICANT: Harlocker, Susan L.

APPLICANT: Kalos, Michael D.

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY

TITLE OF INVENTION: AND DIAGNOSIS OF PANCREATIC CANCER

FILE REFERENCE: 210121.531

CURRENT APPLICATION NUMBER: US/09/872,153

CURRENT FILING DATE: 2001-05-31

NUMBER OF SEQ ID NOS: 28

SOSTWARE: FastSEQ for Windows Version 4.0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SMISSPROT: Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CTCACATCCTCACTCCTGGCACCCCGTCTCCTACAAGATGAGAGACCGAAAGAGCCCCTT

NOTE: This is a 'working draft' sequence. It currently consists of 5 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PRI 01-MAR-2002
                                                                                                                                                                                                                                                                                                                                                     Louis
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Louis
                                                                                                                                                                                                                                                  USA
```

```
This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
restriction digest.
                                                                                                                                                                                 quality >=
```

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc Louis

SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org

NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-32C8, 2000 bp overlap; the clone sequenced to the right is RP11-541E12, 2000 bp overlap. Actual end of this clone is at base position 37821 of RP11-541E12.

Single stranded/single chemistry coverage below phred30, base position 19583 to 19596.

A trasposon was identified in the vector sequence of the clone ${\tt RP11-382L24}$.
